

An aerial photograph of the nose of a white aircraft on a tarmac. Two ground crew members in high-visibility vests are visible on the ground. Yellow and red painted markings are on the pavement. A large shadow of the aircraft is cast on the ground.

CRANE OPERATION CONTROL

Punctuality and smooth operation are the key factors both for the passenger and the airline itself. You need a system that informs you about possible irregularities and helps you see alternate solutions.

Overview

Crane OCC is an advanced operation control solution that addresses the most demanding needs of airlines. Crane OCC supports all the industry standards for operation control integration and provides specialized views for different end-users. Easy to use user-views are restricted by user access definitions of the airline which are fully configurable. Crane OCC also supports extensive functionality to maintain schedules.

easily
integrated with
**AMOS
and Lido**

Benefits

User Experience

Color codes and attribute tags contribute Crane OCC user experience. Automatic warning and assistance mechanism decreases the fault while making the overall process more comprehensive for the users.

Integration

Crane OCC has extensive integration capability. Most advance Crew Planning, Schedule Planning and many other systems can be integrated with Crane OCC. This introduces more effective support for all decision makers and other operational departments

Complementary Systems

Hitit's solutions portfolio covers a wide range of areas from passenger service system to slot management, operations control, crew planning and revenue cost analysis. Single database design contributes easier maintenance and operations while improving the integrity through real time native synchronization between systems.

Competitive Power

Crane OCC has the advantage of handling message types such as Movement, LDM, Cargo messages which enables a fully automated system. It also makes it easier to manage operations for operation control departments in airlines

manages
